

The new shape of **access**

DOMETIP

[introduction](#)

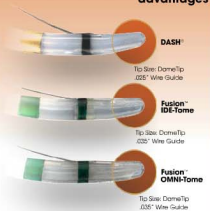

[advantages](#)

[functionality](#)

[faq](#)

[order info](#)

The smooth, round shape of the DomeTip eliminates the flat surface at the end of the catheter that can catch on papillary fronds when attempting to cannulate. The result: potentially easier access, less trauma, and ease of use that could save time.

advantages

DASH[®]

Tip Size: DomeTip
.025" Wire Guide

Fusion[™] IDE-Tome

Tip Size: DomeTip
.025" Wire Guide

Fusion[™] OMNI-Tome

Tip Size: DomeTip
.035" Wire Guide

- Q.** What is the French size at the tip?
- A.** French size at the tip is really a measure of the diameter of the flat end of the catheter. Since there is no flat end to a DomeTip, its French size at the tip is theoretically zero. The French size gradually increases up to the French size of the catheter body.
- Q.** What products have the DomeTip feature?
- A.** The DomeTip currently is available on all D.A.S.H., Tri-Tome, Cannulatome II and Cotton Cannulatome II Sphincterotomes, as well as Fusion ERCP Catheters, and Glo-Tip II ERCP Catheters.
- Q.** Will the order number for products adopting the DomeTip remain the same?
- A.** Yes. The DomeTip will replace the regular tip on select cannulating devices, but the order number will not change.
